

# The Ventech

Liquid Heat Generator **LHG**

## Up to 50,000 BTU/hr of Instant heat

Defrosts the windows and heats the cabin FAST. We're talking just a few minutes - not ten, or fifteen, or longer. More instant heat than any other supplemental heater means no more over-night plugins, bothersome pre-starting, or long, cold idling. No more shivering the whole trip in a freezing cabin.

## Protects Your Investment

A cold running engine creates deposits and stresses the after-treatment system. The Ventech LHG helps bring your engine to proper operating temperature quickly and continues to add heat to the water jacket when necessary to maintain proper running temperature. The LHG monitors the coolant temperature and turns off and on automatically to protect your engine and after-treatment system from the damaging and costly effects of running cold.

## Hassle-Free & Maintenance-Free

The Ventech LHG is completely automated. It is controlled by our intelligent Gen-3 ECU, which monitors external and internal coolant temperatures, RPMs and other factors. The LHG runs automatically when required, and only when required. And, the LHG doesn't need regular maintenance, like many other supplemental heaters.

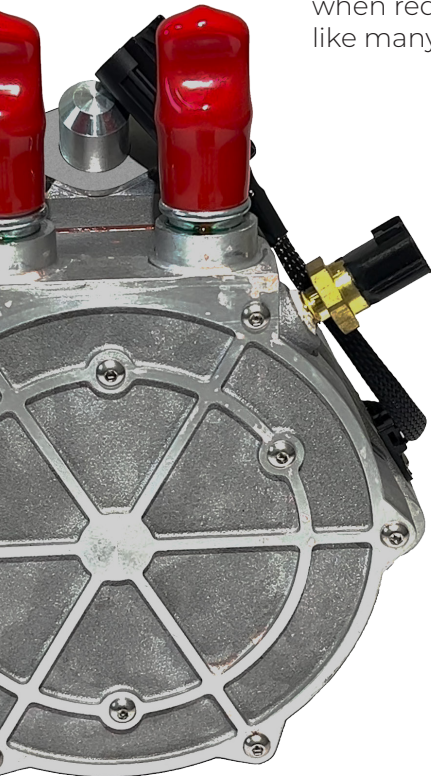

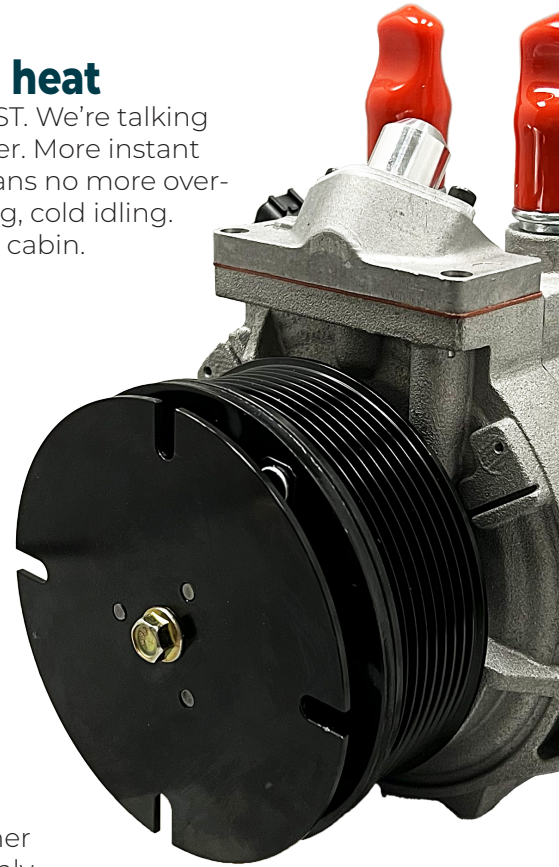

## Economical and Eco-Friendly

Unlike other supplemental heaters, the Ventech LHG doesn't need to be plugged in, and it doesn't use a flame to create heat, so it needs no fuel line connection and has no exhaust. The LHG keeps your engine and after-treatment system at the right temperature for complete combustion preventing soot and carbon buildup. Plus, better combustion saves you on fuel costs and means fewer regens.

## Easy to Install

The Ventech LHG is available in kits designed especially for light to medium duty diesel trucks. Installation is straight-forward for anyone with basic mechanical skills, can be completed in only a few hours, and no specialty tools are required.
